

**Valvole overcenter**

**Counterbalance valves**

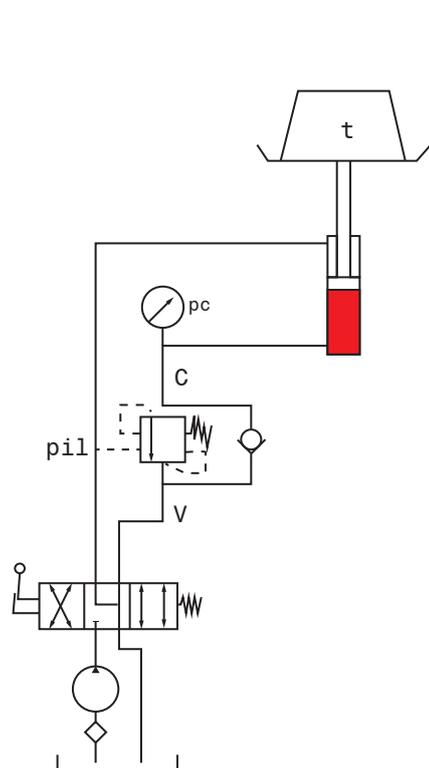

## VALVOLE OVERCENTRE COUNTERBALANCE VALVES

Le valvole Overcentre controllano il blocco ed il movimento di un attuatore idraulico, sia esso un cilindro od un motore, in una sola direzione (semplice effetto) o in entrambe le direzioni (doppio effetto).

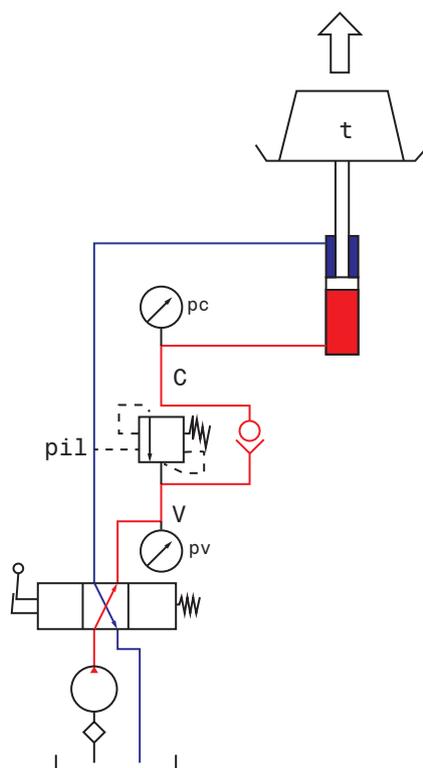

FUNZIONI:

The counterbalance valves control the movement of an hydraulic actuator, in one direction (single effect) or in both direction (double effect).

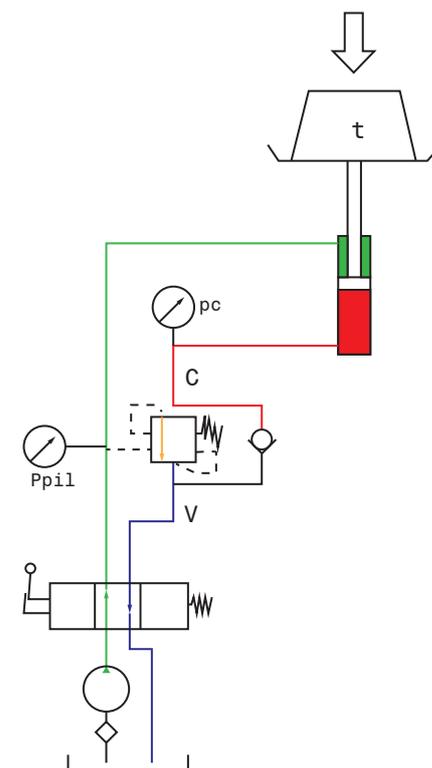

FUNCTIONS:

Sostentamento del carico  
*Locking of the downstream*

Salita libera del carico  
*Free upstream flow for load lifting*

Discesa controllata del carico  
*Cavitation free load lowering*

### - SOSTENTAMENTO DEL CARICO

Gli accoppiamenti tra i componenti interni della valvola overcentre consentono di ridurre al minimo le trafilate di olio; in questo modo la valvola, essendo chiusa, non consente la discesa del carico.

La valvola è tarata ad una certa pressione  $P_t$ , qualora la pressione del carico si avvicinasse troppo alla pressione  $P_t$  la valvola inizierebbe ad aprirsi facendo scendere il carico (il funzionamento è analogo a quello di una valvola imitatrice di pressione).

Per questo motivo è importante conoscere il valore della massima pressione indotta dal carico ( $P_c$ ) in modo da scegliere accuratamente la pressione di taratura.

La pressione di taratura deve essere almeno 1.3 volte la pressione indotta dal carico per evitare che un'eccessiva pressione possa far scendere il carico.  $P_t > 1.3 P_c$

### - SALITA LIBERA DEL CARICO

La pressione necessaria per alzare il carico è fornita dalla pompa. La valvola di non ritorno si apre e permette il passaggio dell'olio che riempie la camera del cilindro in pressione. Il ritorno dell'olio è libero.

La pressione a monte della valvola overcentre ( $P_v$ ), cioè la pressione fornita dalla pompa, è data dalla somma tra la pressione indotta dal carico e la caduta di pressione ( $\Delta P_v$ ) attraverso la valvola (che dipende dalla portata dell'impianto).

$$P_v = P_c + \Delta P_v$$

### - LOCKING OF THE DOWNSTREAM

The load induces a pressure ( $P_c$ ) in the cylinder. The counterbalance valve is closed. In this way the load keeps its position.

As the valve is set to a certain pressure ( $P_t$ ), once the load induced pressure nears this setting, the valve starts to open, lowering the load (the valve, in this way, acts like a pressure relief valve). To avoid this "load lowering", it is important to know the maximum load induced pressure in order to choose the correct setting.

Setting pressure must be at least 1.3 times the maximum load induced pressure:  $P_t > 1.3 P_c$

### - FREE UPSTREAM FLOW FOR LOAD LIFTING

The pump gives the pressure to lift the load, the check valve opens, and the oil flow fills the pressured cylinder chamber. Return oil is free.

$P_v$  pressure (i.e. pump pressure) comes from the load, while pressure drops through the valve (pressure drop depends on flow rate).

$$P_v = P_c + \Delta P_v$$

## VALVOLE OVERCENTER COUNTERBALANCE VALVES

### - DISCESA CONTROLLATA DEL CARICO

Il carico non sfugge per effetto del peso proprio in quanto la valvola non consente alcuna cavitazione.

Il controllo della discesa avviene tramite la pressione di pilotaggio che regola l'apertura della valvola (vedi figura 3).

Si definiscono:

Rp= rapporto di pilotaggio della valvola

Pc= pressione indotta dal carico

Ppil= pressione di pilotaggio

Pt= pressione di taratura

j= rapporto tra le aree del cilindro = area lato fondello / area lato stelo.

Nella camera del cilindro sottoposta alla pressione Pc (pressione indotta dal carico) si va ad aggiungere la pressione di pilotaggio (tenendo conto del rapporto tra le aree del cilindro).

Formule per il calcolo della pressione di pilotaggio:

1. Nel caso rappresentato (pressione del carico sull'area lato fondello):

$$Ppil=(Pt-Pc)/(Rp+1/j)$$

2. Nel caso in cui la pressione indotta dal carico agisca sul lato dello stelo:

$$Ppil=(Pt-Pc)/(Rp+j)$$

3. Nel caso di motori idraulici o di cilindri con aree uguali (es. stelo bilaterale):

$$Ppil=(Pt-Pc)/(Rp+1).$$

**Il rapporto di pilotaggio** è definito come:

Rp= Area Efficace di pilotaggio/Area efficace dell'otturatore.

**Alto rapporto di pilotaggio:** Consente il movimento dell'attuatore e l'abbassamento del carico con una pressione di pilotaggio limitata; favorisce le elevate velocità di movimento ed un risparmio energetico. E' raccomandato per applicazioni in cui la geometria della struttura sotto carico è tale da mantenere pressochè costante la pressione idraulica durante il movimento dell'attuatore.

**Basso rapporto di pilotaggio:** comporta una pressione di pilotaggio più elevata ma permette un controllo preciso e regolare del movimento.

E' raccomandato nelle applicazioni ove la pressione indotta dal carico varia notevolmente a seconda delle varie configurazioni della struttura, quindi dove possono presentarsi problemi di stabilità del movimento.

### - VALVOLE OVERCENTER COMPENSATE IN PRESSIONE

Queste speciali valvole di bilanciamento, sono insensibile alla contropressione sullo scarico.

Sono utilizzate nei circuiti con distributori a centro chiuso, con valvole ausiliare antishock sulle bocche di mandata.

Casi tipici di impiego:

Valvole overcenter che devono aprirsi con una pressione di pilotaggio limitata, anche in presenza di contropressione allo scarico.

Valvole overcenter con apertura progressiva anche in presenza di oscillazione di pressione nel ramo di scarico.

### - CAVITATION FREE LOAD LOWERING

*Load lowering is controlled by the pilot pressure.*

*Defined:*

*Rp = pilot ratio*

*Pc= load induced pressure*

*Ppil= pilot pressure*

*Pt= setting pressure*

*j= area ratio= cylinder bore side area / cylinder annular area*

*With the following formulas, it is possible to calculate the pilot pressure:*

*1. Load pressure on bore cylinder chamber:*

$$Ppil=(Pt-Pc)/(Rp+1/j)$$

*2. Load pressure on annular cylinder chamber:*

$$Ppil=(Pt-Pc)/(Rp+j)$$

*3. Hydraulic motors, or actuators with j= 1:*

$$Ppil=(Pt-Pc)/(Rp+1)$$

*The Pilot Ratio is defined:*

*R=Area of Pilot Piston/Differential area of Control Plunger*

**High Pilot Ratio** permits to lower the load with little pilot pressure, allowing a quicker operation of the machine combined with energy saving. It is best suited for applications where the kinematic motion of the structures maintains the load induced pressures approximately constant.

**Low pilot Ratio** requires a high pilot ratio pressure in order to lower the load, but it permits a more precise and smooth control of the motion. It is recommended for applications where the load induced pressure varies during the motion with resulting instability of the machine.

### - COUNTERBALANCE VALVES PRESSURE COMPENSATED

*The functions of a pressure compensated counterbalance valve are independent from the pressure in the return line.*

*They are normally fitted in conjunction with "Closed Center" directional spools, with anti-shock valves on the delivery ports, in the following cases:*

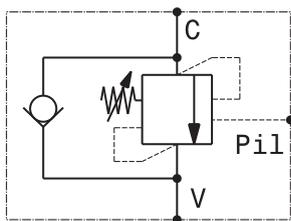

*When the counterbalance valves must allow the load to be lowered with limited pilot pressure, also in presence of back pressure.*

*When it is necessary to have an high degree of stability of the overcenter valve opening which must remain controlled and stable also in case of pressure fluctuations in the return line.*

 The specifications are not binding, CBF reserves the right to introduce modifications without notice.

Valvola OVERCENTER a cartuccia  
 Pilot assisted COUNTERBALANCE valve – cartridge type  
 mod. OVC3008-C-3P

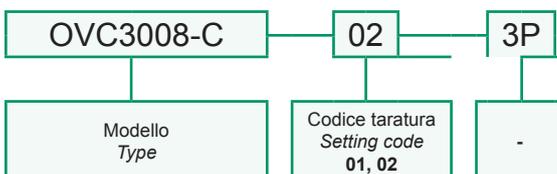

Portata massima Max flow	30 l/min 7.9 gpm
Pressione massima Max pressure	350 bar 5000 psi
Rapporto di pilotaggio standard Standard pilot ratio	4:1
Rapporto di pilotaggio a richiesta Pilot ratio upon request	3:1
Coppia di serraggio Installation torque	30 ÷ 35 Nm 22.5 ÷ 26 lb ft

Dati e tarature ottenuti usando olio con viscosità 30 cSt a 50°C Performances and calibrations are carried out by using hydraulic oil with 30 cSt viscosity at 50°C	
Viscosità consigliate Recommended viscosity	10 ÷ 420 cSt
Temperature di lavoro Working temperature	-20 ÷ +90 °C
Filtrazione assoluta Absolute filtration	25 µ

<b>Taratura Setting</b>	La valvola deve essere tarata almeno 1.3 volte la massima pressione indotta dal carico The valve must be set at least 1.3 times maximum load induced pressure	
Codice Code	Taratura standard Standard setting (Q=5 l/min)	Campo di taratura Adj. Pressure range
01	100 bar 1450 psi	20÷200 bar 290÷2900 psi
02	280 bar 4000 psi	50÷350 bar 725÷5000 psi

Valvola OVERCENTER a cartuccia  
 Pilot assisted COUNTERBALANCE valve – cartridge type  
 mod. OVC4010-C

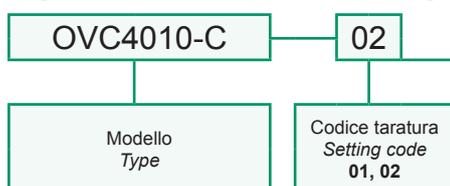

Portata massima Max flow	50 l/min 13.2 gpm
Pressione massima Max pressure	350 bar 5000 psi
Rapporto di pilotaggio standard Standard pilot ratio	4:1
Rapporto di pilotaggio a richiesta Pilot ratio upon request	3:1 8:1 10:1
Coppia di serraggio Installation torque	50 ÷ 60 Nm 38 ÷ 45 lb ft

Dati e tarature ottenuti usando olio con viscosità 30 cSt a 50°C Performances and calibrations are carried out by using hydraulic oil with 30 cSt viscosity at 50°C	
Viscosità consigliate Recommended viscosity	10 ÷ 420 cSt
Temperature di lavoro Working temperature	-20 ÷ +90 °C
Filtrazione assoluta Absolute filtration	25 µ

<b>Taratura Setting</b>	La valvola deve essere tarata almeno 1.3 volte la massima pressione indotta dal carico. The valve must be set at least 1.3 times maximum load induced pressure		
Codice Code	Taratura standard Standard setting (Q=5 l/min)	Campo di taratura Adj. Pressure range	Colore molla Spring color
01	100 bar 1450 psi	20÷200 bar 290÷2900 psi	Bianco White

 The specifications are not binding, CBF reserves the right to introduce modifications without notice.

Valvola OVERCENTER semplice effetto con pilotaggio esterno flangiabile  
Flange mounted, single effect COUNTERBALANCE valve with external pilot

mod. OVC-SE-F38

Corpo in alluminio  
Aluminium body

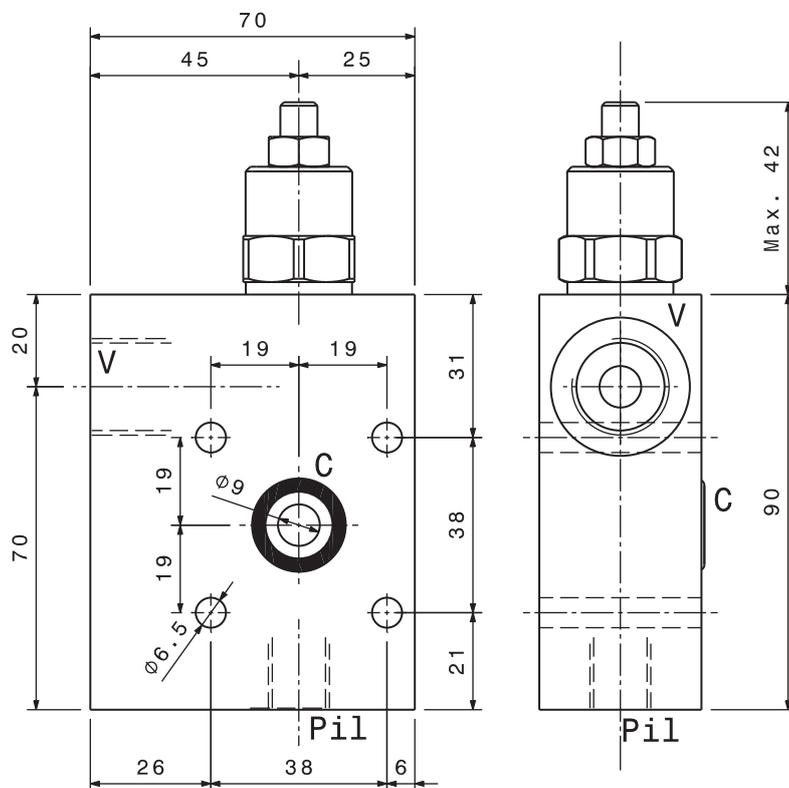

Pressione massima Max pressure	350 bar 5000 psi
Rapporto di pilotaggio standard Standard pilot ratio	4,25:1
Rapporto di pilotaggio a richiesta Pilot ratio upon request	3:1 8:1 10:1

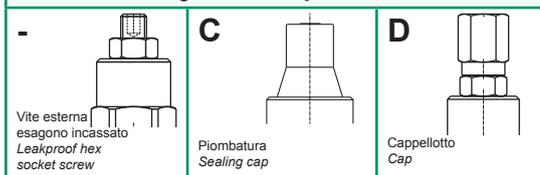

Dati e tarature ottenuti usando olio con viscosità 30 cSt a 50°C Performances and calibrations are carried out by using hydraulic oil with 30 cSt viscosity at 50°C	
Viscosità consigliate Recommended viscosity	10 ÷ 420 cSt
Temperature di lavoro Working temperature	-20 ÷ +90 °C
Filtrazione assoluta Absolute filtration	25 µ

Modello Type	V	Pil	Portata max Max. flow
OVC-SE-F38-38	3/8" GAS	1/4" GAS	40 l/min 10.5 gpm
OVC-SE-F38-12	1/2" GAS	1/4" GAS	60 l/min 16 gpm

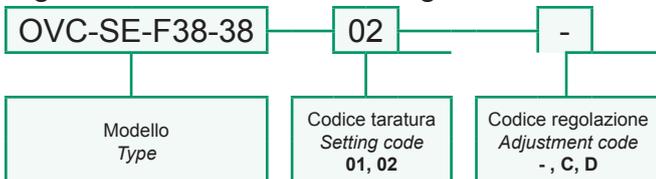

Taratura Setting	La valvola deve essere tarata almeno 1.3 volte la massima pressione indotta dal carico The valve must be set at least 1.3 times maximum load induced pressure		
Codice Code	Taratura standard Standard setting (Q=5 l/min)	Campo di taratura Adj. Pressure range	Colore molla Spring color
01	100 bar 1450 psi	20÷200 bar 290÷2900 psi	Bianco White
02	280 bar 4000 psi	50÷350 bar 725÷5000 psi	Nero Black

Regolazioni - Adjustments

Valvola OVERCENTER in linea semplice - acciaio  
 In line, single effect COUNTERBALANCE valve - steel  
 mod. OVC-SE-L-PST-U

Corpo in acciaio  
 Steel body

Pressione massima Max pressure	350 bar 5000 psi
Rapporto di pilotaggio standard Standard pilot ratio	4:1
Rapporto di pilotaggio a richiesta Pilot ratio upon request	3:1 8:1 10:1

Dati e tarature ottenuti usando olio con viscosità 30 cSt a 50°C  
 Performances and calibrations are carried out by using hydraulic oil with 30 cSt viscosity at 50°C

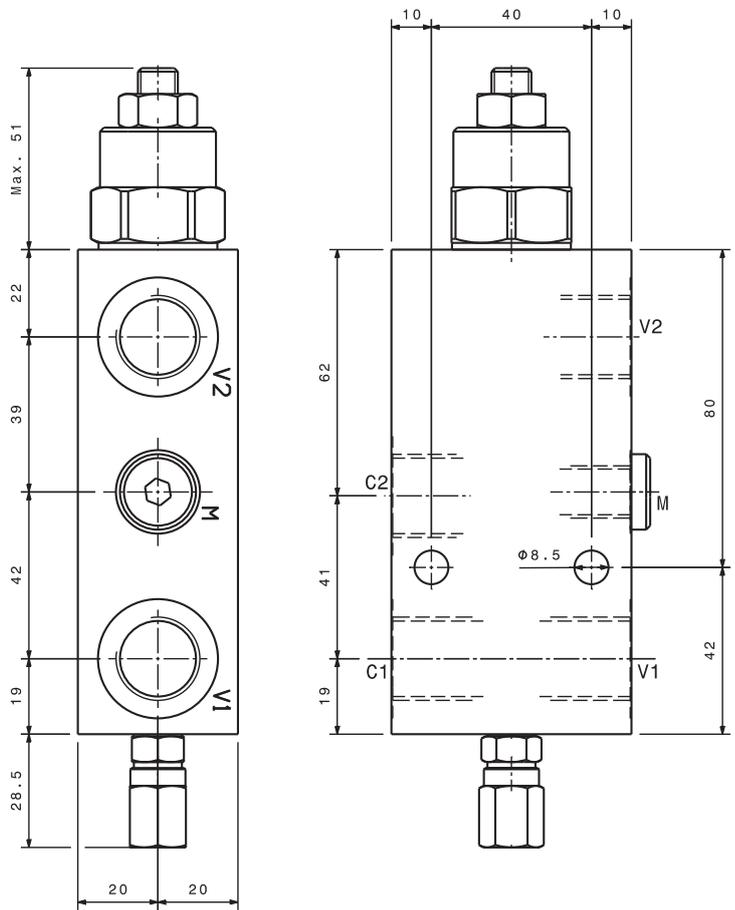

Viscosità consigliate Recommended viscosity	10 ÷ 420 cSt
Temperature di lavoro Working temperature	-20 ÷ +90 °C
Filtrazione assoluta Absolute filtration	25 µ

Modello Type	V1, V2 C1, C2	M	Portata max Max. flow
OVC-SE-L-PST-U-12	1/2" GAS	1/4" GAS	100 l/min 26.4 gpm

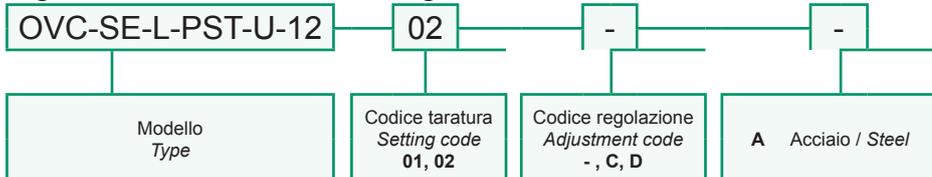

Taratura Setting	La valvola deve essere tarata almeno 1.3 volte la massima pressione indotta dal carico The valve must be set at least 1.3 times maximum load induced pressure		
Codice Code	Taratura standard Standard setting (Q=5 l/min)	Campo di taratura Adj. Pressure range	Colore molla Spring color
01	100 bar 1450 psi	20÷200 bar 290÷2900 psi	Bianco White
02	280 bar 4000 psi	50÷350 bar 725÷5000 psi	Nero Black

Regolazioni - Adjustments

<p>Vite esterna esagono incassato Leakproof hex socket screw</p>	<p>Piombatura Sealing cap</p>	<p>Cappellotto Cap</p>

Valvola OVERCENTER doppio effetto in linea  
*In line, double effect COUNTERBALANCE valve*  
 mod. OVC-DE-L-25-14

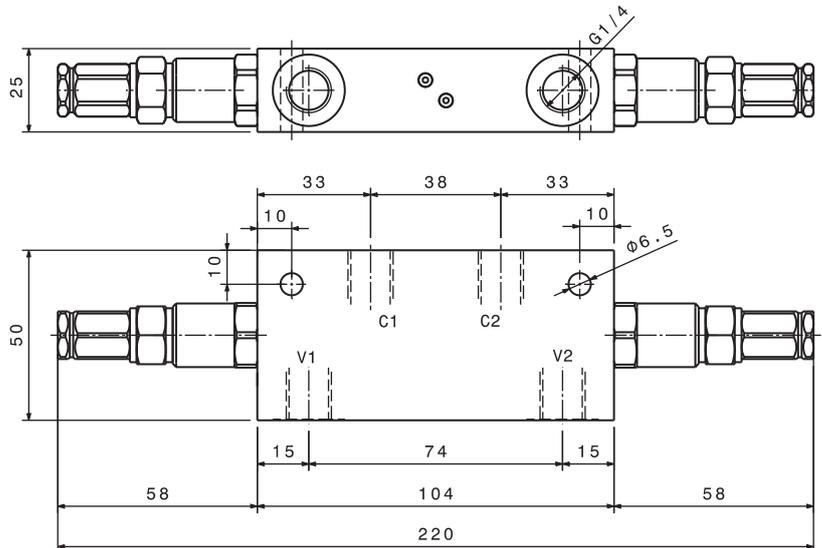

Versione con corpo in alluminio o in acciaio  
*Aluminium or steel body version*

Portata massima <i>Max flow</i>	25 l/min <i>6.6 gpm</i>
Pressione massima <i>Max pressure</i>	350 bar <i>5000 psi</i>
Rapporto di pilotaggio standard <i>Standard pilot ratio</i>	4:1
Rapporto di pilotaggio a richiesta <i>Pilot ratio upon request</i>	3:1 8:1 10:1

Dati e tarature ottenuti usando olio con viscosità 30 cSt a 50°C  
*Performances and calibrations are carried out by using hydraulic oil with 30 cSt viscosity at 50°C*

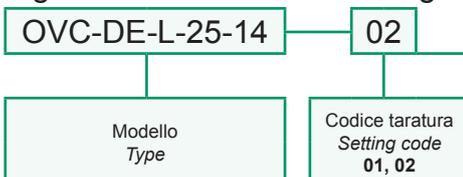

Viscosità consigliate <i>Recommended viscosity</i>	10 ÷ 420 cSt
Temperature di lavoro <i>Working temperature</i>	-20 ÷ +90 °C
Filtrazione assoluta <i>Absolute filtration</i>	25 µ

Taratura Setting			
La valvola deve essere tarata almeno 1.3 volte la massima pressione indotta dal carico <i>The valve must be set at least 1.3 times maximum load induced pressure</i>			
Codice Code	Taratura standard Standard setting (Q=5 l/min)	Campo di taratura Adj. Pressure range	Colore molla Spring color
01	100 bar <i>1450 psi</i>	20÷200 bar <i>290÷2900 psi</i>	Bianco <i>White</i>

Rapporto di pilotaggio standard <i>Standard pilot ratio</i>	4,25:1
Rapporto di pilotaggio a richiesta <i>Pilot ratio upon request</i>	3:1 8:1 10:1

Dati e tarature ottenuti usando olio con viscosità 30 cSt a 50°C  
*Performances and calibrations are carried out by using hydraulic oil with 30 cSt viscosity at 50°C*

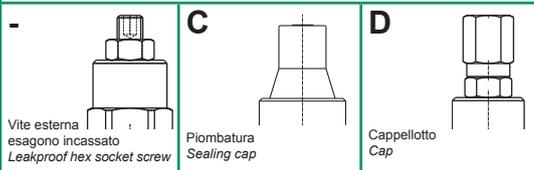

Viscosità consigliate <i>Recommended viscosity</i>	10 ÷ 420 cSt
Temperature di lavoro <i>Working temperature</i>	-20 ÷ +90 °C
Filtrazione assoluta <i>Absolute filtration</i>	25 µ

Modello <i>Type</i>	V1, V2 C1, C2	Portata max <i>Max. flow</i>
OVC-DE-L-CC-18	1/8" GAS	15 l/min 4 gpm
OVC-DE-L-CC-14	1/4" GAS	25 l/min 6.5 gpm

<b>Taratura <i>Setting</i></b>	La valvola deve essere tarata almeno 1.3 volte la massima pressione indotta dal carico <i>The valve must be set at least 1.3 times maximum load induced pressure</i>		
Codice <i>Code</i>	Taratura standard <i>Standard setting</i> (Q=5 l/min)	Campo di taratura <i>Adj. Pressure range</i>	Colore molla <i>Spring color</i>
01	100 bar 1450 psi	20÷200 bar 290÷2900 psi	Bianco White
02	280 bar 4000 psi	50÷350 bar 725÷5000 psi	Nero Black

**Regolazioni - Adjustments**

**Sigla di ordinazione / Ordering code**

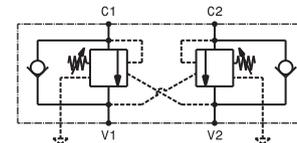

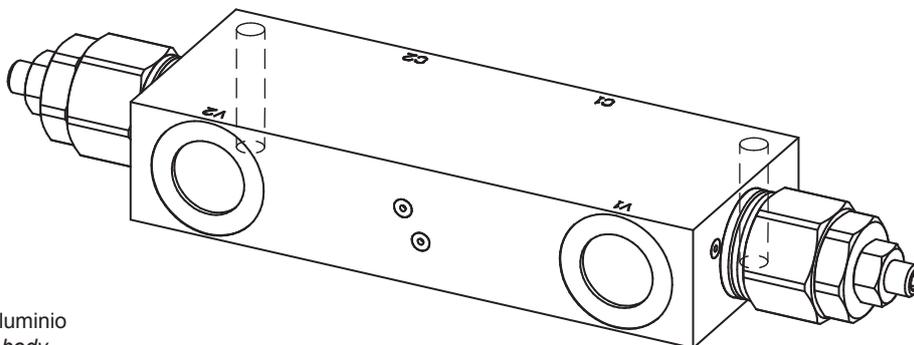

For flow diagram see  
**PRESSURE DROP OVERCENTER VALVES (7)**

I dati non sono impegnativi, CBF si riserva di apportare modifiche senza preavviso.  
*The specifications are not binding, CBF reserves the right to introduce modifications without notice.*

Valvola OVERCENTER compensata in pressione doppio effetto in linea  
*In line, double effect pressure compensated COUNTERBALANCE valve*

mod. OVC-DE-L-200-CC

Corpo in alluminio  
*Aluminium body*

Pressione massima <i>Max pressure</i>	350 bar 5000 psi
Rapporto di pilotaggio standard <i>Standard pilot ratio</i>	4:1
Rapporto di pilotaggio a richiesta <i>Pilot ratio upon request</i>	3:1 8:1 10:1
