

Check valves type UZZB 10 are used to close hydraulic fluid flow in one direction and allow free flow in the opposite direction.

The valves are for subplate mounting and can be installed in systems in any positions together with a connection plate.

Sealing of interfaces is provided by O-rings which are included.

DESCRIPTION OF OPERATION

In the check valve type UZZB 10 the closing element is a poppet 2 pushed on to the seat in the housing 1. Flowing through the valve in the direction A to B fluid lifts the poppet from its seat and permits free flow. Cracking pressure depends on initial spring tension.

In the opposite direction B to A the spring and the fluid push the poppet on to the seat and close the connection without leakage.

Item 3 - O-ring 16 × 3 - 2 pieces
